## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John Carlson on 7/17/2007.

Title: A METHOD FOR MAKING A HOLLOW FAN BLADE WITH MACHINED  
INTERNAL CAVITIES

In claim 15, line 6, the phrase "surfaces are machined along elongated continuous paths" should read - - surfaces are simultaneously machined along elongated continuous paths - -.

*This claim change was made to explicitly recite that the machining of the floor and opposite interior wall surfaces of cavities are done simultaneously.*

Claim 16 is cancelled.

*The limitation of "simultaneous machining" is incorporated into claim 15 above.*

2. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: A new replacement set of formal drawings is required. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

### **REASONS FOR ALLOWANCE**

3. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 12-15, the prior art fails to teach or fairly suggest the step of simultaneously machining a floor and opposite interior wall surfaces of the cavities along a plurality of elongated cavity paths. Although Butter (US 3,678,802) discloses a general teaching of machining a continuous cavity along an elongated path, however it teaches that the simultaneous machining of the floor and opposite interior wall surfaces of the cavity is done in only a portion of the path while the rest of the path is done in multiple passes that does not include the simultaneous machining of all three surfaces.

Furthermore, Wiggs et al. (US 5,269,058), Nelson (US 3,628,226) and Porter et al. (US 5,063,662) all teach that grooves are machined in each half of hollow airfoils/ blades followed by joining of the two halves to form a complete airfoil/blade, however, they fail to teach the simultaneous machining of the floor and the opposing interior wall surfaces of these grooves.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
